## Session 6 <br> Question

Given the Information below:

| Maturity | Coupon | Quoted Price | Yield | Price Value of a <br> Basis Point |
| :--- | :--- | :--- | :--- | :--- |
| 2-years | $7.00 \%$ | $\$ 99.00$ | $7.90 \%$ | $\$ 180$ |
| 7-years | $9.00 \%$ | $\$ 102.00$ | $8.50 \%$ | $\$ 400$ |
| 30-years | $10.00 \%$ | $\$ 106.00$ | $9.30 \%$ | $\$ 1,000$ |

|  | 2 -years | 3 -years | 4 -years | 5 -years | 7-years | 10 -years | 20 -years | 30 -years |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Std. Deviation | 20.3 bp | 20.5 bp | 21.2 bp | 21.0 bp | 20.8 bp | 20.3 bp | 19.2 bp | 18.3 bp |

## Correlation

| 2-years | 1.000 |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 3-years | 0.984 | 1.000 |  |  |  |  |  |  |
| 4-years | 0.973 | 0.983 | 1.000 |  |  |  |  |  |
| 5-years | 0.956 | 0.970 | 0.988 | 1.000 |  |  |  |  |
| 7-years | 0.927 | 0.945 | 0.972 | 0.985 | 1.000 |  |  |  |
| 10-years | 0.91 | 0.939 | 0.965 | 0.978 | 0.993 | 1.000 |  |  |
| 20-years | 0.891 | 0.909 | 0.940 | 0.953 | 0.973 | 0.982 | 1.000 |  |
| 30-years | 0.886 | 0.904 | 0.933 | 0.949 | 0.969 | 0.982 | 0.988 | 1.000 |

Suppose you want to hedge a position in $\$ 100$ million of 7 -year bonds.
a. Calculate the optimal hedging using two bonds, 2 -years and 30 -years bonds (shorter and longer maturity bonds).
b. What is the disadvantage of hedging with just one bond e.g. 30 -years bond and with two bonds (e.g. shorter and longer maturity bonds) as in a.?
